8. Statement of Significance

=====

Applicable National Register Criteria

(Mark "X" in one or more boxes for the criteria qualifying the property for National Register listing.)

A Property is associated with events that have made a significant contribution to the broad patterns of our history.

B Property is associated with the lives of persons significant in our past.

C Property embodies the distinctive characteristics of a type, period, or method of construction or represents the work of a master, or possesses high artistic values, or represents a significant and distinguishable entity whose components lack individual distinction.

D Property has yielded, or is likely to yield, information important in prehistory or history.

Criteria Considerations

Property is:

A owned by a religious institution or used for religious purposes.

B removed from its original location.

C a birthplace or grave.

D a cemetery.

E a reconstructed building, object, or structure.

F a commemorative property.

G less than 50 years of age or achieved significance within the past 50 years.

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 7Page 1**Description**

Present-day Ravenswood sits on the eastern (left) bank of the Ohio River between mile points 220 and 221, approximately mid-way between Pittsburgh and Cincinnati. The Ohio River, a product of the last ice age in North America, marks the southern and eastern most advance of the glaciers. As the glaciers melted, the sand, gravel, cobbles and boulders that they had transported were deposited as glacial till and moraine. Ravenswood rests on these deposits. The Ohio River began to carve its channel through these deposits and continues to do so today.

The benches and plains of the Ohio River Valley are characterized by fertile, well-drained soils. These lowlands were a favorite hunting ground of Native Americans and were some of the most sought after lands by the area's early European settlers. The majority of Ravenswood rests on a bench of these soils that lies out of the 100-year floodplain.

The northern boundary of the district is Sycamore Street; the eastern boundary is the residential properties to the east of Preston and Bedford Streets (the town's eastern, corporate limits); the southern boundary is Sandy Creek; and the western boundary is the Ohio River.

The "Old Town" section of the City of Ravenswood lies at the confluence of Sandy Creek and the Ohio River. The CSX Railroad (successor to the Ohio River Rail Road and the B&O) bisects the western portion of the historic district along Broadway Street. Washington Street (State Route 68) runs north-south through the historic district. The commercial resources are located primarily along Washington Street with scattered locations for about two blocks along Sand, Walnut and Mulberry Streets and a block on either side of Sycamore Street.

Historically, the older commercial section of the town focused on the river, and it was centered along Broadway and Water Streets. However, due to repeated flooding, a shift was made for dryer locations to the east. The residential portion of the "Old Town" is located primarily east of Washington Street. The residences are not densely packed as in some other urban areas and each lot is a generous size with front, side and/or rear yards. The streets are wide avenues that are a typical riverfront-town feature.

The district contains primarily mid to late 19th and early 20th century resources. Due to the age of the town and its resources, some modifications have been made, but they are not found in great numbers. Homes and businesses are generally well maintained. Forced or voluntary demolition of homes or business buildings is an infrequent occurrence. When it does occur, it will typically be the result of fire damage. Modern intrusions are not found in great numbers. For the most part, modern intrusions are located to the north of the "Old Town" district. Within

(NPS Form 10-900)

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 7Page 2

the district, most modern intrusions are located close to the Ohio River, due to reconstruction following flood events. Thus, the historic district area maintains much of its original ambience and character.

The town of Ravenswood adopted a Comprehensive Plan for Development and Planning and Zoning Ordinances in the 1950s, in anticipation of the development that was expected to follow the Kaiser Aluminum and Chemical Corporation's decision to build the world's largest integrated aluminum reduction and fabrication mill in the Ravenswood vicinity. The majority of the property within the district was zoned as a "C-Commercial District" or a "R2 Multiple-Family Residential District". Of course, the R-2 zoning also allows for single-family dwellings. In fact, most of the homes in the district are single-family residences. A small proportion are homes that have been divided into multiple apartments and a still smaller proportion are structures that were constructed as multi-family units or were commercial buildings that have been converted into multi-family housing units.

In the "C" district, buildings are limited to a maximum height of 2 stories or 30 feet; however, a handful of commercial buildings that were constructed before enactment of the ordinance are three-stories tall. In the "C" district, buildings may be built up to the front property line (typically, to the sidewalk). In the commercial area along Washington, Walnut, and Sand Streets, most commercial buildings do extend to the sidewalk line and most are two stories tall. As one moves away from these areas, commercial buildings often occupy buildings originally constructed as houses, or are situated on former residential lots. Such business buildings are located some distance (less than 30 feet, typically) off of the sidewalk line.

In the R-2 districts, residences may be 3 stories or 35 feet tall. They must have front and rear yards that are at least 20 feet deep and side yards that vary in width from 6 to 15 feet, depending on the height of the building.

Historic District Resources

An intensive survey of the district identified 313 buildings that contribute to its integrity, 122 that were considered to be non-contributing because of modifications and 174 that are currently considered non-contributing because of their age (i.e., they are less than 50 years old).

These resources are discussed, in detail, in the following pages. Photographs of many of the contributing buildings and structures are presented as well.

(NPS Form 10-900)

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 7Page 3**Downtown Commercial District**

Fronting on Walnut Street, and located at its intersection with Washington Street, one of the more elaborate buildings within the historic district is the McIntosh Building (JA-0010-0037). It represents the Classical Revival style in a commercial building. It illustrates the style with its elaborate cornice with a central cartouche with the date "1901" in the center and "J.A. McIntosh" in a panel below the cartouche flanked by paneled newel posts; the newel posts are also located at each end. Below the dentiled frieze are recessed divided glazed openings. The upper floor is divided by engaged brick pilasters with Ionic caps. The first floor has been covered with a metal veneer but the building overall retains its defining characteristics.

One of the more common styles for the commercial buildings in Ravenswood is the Commercial style. As the name implies this is a very simple style of architecture where form follows function. Commercial style buildings include: JA-0010-0038; JA-0010-0040; JA-0204; JA-0218; JA-0219; JA-0231; JA-0235; JA-0240; JA-0296; and JA-0297.

Located on Washington Street, JA-0010-0044 is an example of an Art Deco Style commercial building. It illustrates the style through its flat roof, the horizontal lines of the primary and secondary cornices, and especially with the brick accents on the upper floor between the windows.

There is also one Second Empire Style commercial building (JA-0010-0045, ca. 1890) within the historic district although it was built originally as a residence. Located on Washington Street, historically, the building was used as a hospital and is currently a dentist's office. The Second Empire style was typically used in the mid to late 19th century and was prevalent in river towns although it was usually a residential style. The style is illustrated through the mansard roof with dormers on the lower slope, the bracketed eave and often, arched windows with keystones.

One Washington Street commercial building within the historic district is Neo-Classical Revival (JA-0010-0051, ca. 1900). The style is illustrated through the large primary cornice with modillions and the heavy jack arches with large keystones over the vertically divided windows on the upper story. The three storefronts on the first floor have been modified through the years to suit the tenants but the building retains its character defining elements.

The remaining commercial buildings include Enframed Block, One Part Commercial Block, Two Part Commercial Block and modern buildings. These describe the configuration of the building overall rather than a style.

(NPS Form 10-900)

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 7Page 4

One of the oldest commercial buildings within "Old Town" is the Victoria Inn (JA-0010-0031, ca. 1865). The building originally had a shallow hip roof but it currently has a gable roof over both portions of the building; the building was built in two sections. It served many people when the railroad was booming and it is located on Broadway Street, facing the railroad tracks.

Churches

There are five churches within the historic district and three of the five are Gothic Revival style. The five churches are the First Christian Church (JA-0122, c. 1895); the First Baptist Church (JA-0176, c. 1876); the Grace Episcopal Church (JA-0187, c. 1900); Our Savior Evangelical Lutheran Church (JA-0199, c. 1928) and the First Presbyterian Church (JA-0010-0068, c. 1850).

Community Building / NYA Hall

There is a unique building within the historic district, the Ravenswood Community Center (JA-0177 and JA-177A), located at 212 Henrietta Street. It was constructed by the National Youth Administration, a program under the "New Deal" program of Franklin Delano Roosevelt during the Great Depression.

The "NYA Hall" was built in 1938 in the Art Deco Style with the cooperation of the City of Ravenswood and the program was geared towards employing younger adults. At some point, it was connected to the McIntosh House via an elevated, brick hyphen. The McIntosh House was built c. 1890 and is Colonial Revival style.

Structures of Note

There are two structures located within the historic district. One is the Ohio River Rail Road bridge/trestle that spans Sandy Creek (JA-0010-0004, ca. 1885). The other is the bridge spanning Sandy Creek along State Route 68/Washington Street (JA-0293, 1953). These are the only two structures within the survey boundaries.

Residential Properties

The residences within the historic district reflect the time period of significance, mid 19th century to mid 20th century, and the architectural styles and house types of the period. The oldest known residence in the historic district is the Fitzhugh House (JA-0010-0011, c. 1830), located at 18 Walnut Street. It is representative of the Greek Revival style and the only Greek Revival style building within the historic district.

Late 19th century architectural styles are represented within the historic district by Queen Anne, Queen Anne Cottage, Folk Victorian, Italianate and Second Empire styles.

Revival style architecture is represented within the historic district with Colonial Revival, Dutch Colonial Revival and Tudor Revival styles. These styles date to the early 20th century.

There are also residences within the historic district that represent the architectural styles and house types of the teens and twenties of the early 20th century. These styles and types include Craftsman Four Square, Craftsman Bungalow and Craftsman.

The mid 20th century is represented by a few homes within the historic district that are Ranch types and Modern styles. In addition to true architectural styles, there are house types and plans that are "Vernacular" in nature, regional architecture. These types include "I" houses, Side Gable Cottage, One-story cube, Gable-Front houses, and Gabled-Ell houses. Gable-Front and Gabled-Ell houses are the most numerous within the historic district.

Contributing, Non-Contributing and National Register Resources within the District

In the following descriptions, outbuildings are denoted "A", "B", "C", etc. and are also classified as to whether they contribute to the district, are non-contributing resources or are part of a property already listed on the National Register.

"Not Eligible" Resources within the District

These buildings are currently Non-Contributing because of their age. That is, these are the "modern" buildings (constructed post 1957) within the bounds of the district. Outbuildings are denoted "A", "B", "C" etc. and are also classified as non-contributing because the principle structure is Non-Contributing, because they have been modified or because, like the principle structure, they were constructed post 1957.

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 8Page 126**Statement of Significance**

The "Old Town" Historic District is locally significant under the National Register *Criterion A* for *Community Planning and Development* and for *Commerce* through its association with the transportation modes of the river, the railroad and the roads. The district also qualifies under the National Register *Criterion C* for *Architecture* through its association with many of the architectural styles of the mid to later 19th and early and mid 20th centuries. The recommended period of significance would be from c. 1830, the construction date of the Fitzhugh/Merritt House (JA-0010-0011) and up to 1957, the construction date of the Miller Building (JA-0010-0052).

Early History

As a reward for service in the French and Indian War, Lieutenant Colonel George Washington and many of his Virginia Regiment militiamen were promised land patents in the Ohio River Valley. In 1770, a party including Washington and a Pennsylvania surveyor, Colonel William Crawford, began an expedition by canoe from Fort Pitt to explore possible sites for the bounty lands due them. The party traveled down the Ohio as far downstream as present-day Point Pleasant.

In 1771, Crawford began to survey the tracts he and Washington had identified on the expedition, including the land on which present-day Ravenswood rests. In a letter penned some twenty years later, Washington would describe his Ohio River holdings as "the cream of the Country in which they are; that they were the first choice of it." Present-day Ravenswood was laid out on a portion of a 2,448-acre tract surveyed for Washington by Crawford in 1771.

On his death, Washington's Ohio River holdings, including present-day Ravenswood, totaled 9,744 acres. Washington willed that many of his holdings should be sold on his death and the proceeds divided into 23 equal lots that then would be passed on to certain named heirs. Among these were the heirs of Ann Ashton, who would share a portion of one share of the estate and Martha Parke Peter, who was given a share. In October of 1804, the 2,448 acres of land around, and on which, present-day Ravenswood sits was surveyed for the purpose of division among the entitled heirs. The actual division was completed in 1805. At that time, the uppermost half of the tract was allotted to Thomas Peter (as agent for his wife Martha Parke Peter) and the lower half was allotted to the heirs of Anne Ashton. When the 1804 survey was completed, it was determined that the actual size of the entire tract was 2,850 acres, not 2,448. Thus, each of the two allotments was for 1,425 acres.

Page 127

Among Ann Ashton's heirs were members of the Fitzhugh family. Circa 1950, Norman Fitzhugh, son of Nicholas Fitzhugh and grandson of Henry and Henrietta S. Fitzhugh, began documenting some of his family's history and that of Ravenswood. The quoted excerpt below is taken from those notes:

The Thomas Peter allotment was sold in 1836, and in 1866, Judge Brown acquired that part bordering on the upper line of Ravenswood.

The heirs of Anne Ashton were, Burditt Ashton, Jr., Anne Ashton and Sarah Ashton Fitzhugh. This property was assessed to the heirs of Anne Ashton until 1810 (I have a receipted tax bill for that year). In 1810, Judge Nicholas Fitzhugh acquired the interest of Burditt Ashton and the interest of Anne Ashton and took title to his wife's interest (I have original deeds). For the year 1811 and subsequently the land was assessed to "Nicholas Fitzhugh Esq." (I have tax tickets 1811-12).

In 1815, the property was divided among five female heirs of Nicholas Fitzhugh - Henry Fitzhugh and his wife Henrietta acquired the interests (except one). The town of Ravenswood is laid out on the Mary Conway Mason Fitzhugh Division.

(NPS Form 10-900)

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 8Page 128

Henry Fitzhugh purchased the land that Ravenswood rests on in July 1836 from Mary Conway Mason (Fitzhugh) Payne. The deed is recorded in Jackson County in Deed Book 1 at page 497. The sketch on the preceding page is the work of Norman Fitzhugh. It depicts the parcels as they were to be divided between the daughters of Judge Nicholas Fitzhugh.

Ultimately members of the Fitzhugh family laid out the original town, all of which was within the Historic District. Settlement in the district, by the Fitzhughs, and others, had begun in earnest by the 1830s. The Fitzhugh home (JA-0010-0011) still stands and it is believed to be the oldest surviving building in Ravenswood.

The community that would become the town of Ravenswood continued to grow through the 1830s and 1840. As the 1850's began, the local citizens began to organize efforts to incorporate the community. By 1850, Jackson County's population had grown to 6,544. Of that total, 276 souls called present-day Ravenswood home. On March 10, 1852, the town of Ravenswood was chartered by an act of the Virginia General Assembly.

The Ohio River marked the southern boundary of the Northwest Territory. As such, it would become the border between the slave states in the south and the free states and territories to the north and west. In 1860, Ravenswood was home to 362 white residents and an unknown, but relatively small number of slaves. Most of the town's residents would have considered themselves northern sympathizers; however, at least 13 families were known southern sympathizers.

Among the southern sympathizers were the Fitzhughs and Flemings and their extended families. Given their sympathies, the Fitzhugh home (JA-0010-0011) and gardens were repeatedly commandeered by Union forces. In 1862, the Fitzhugh home briefly hosted Confederate General Albert Gallatin Jenkins and his troops, including Nicholas Fitzhugh, before they continued their pursuit of fleeing Union forces and moved on into Ohio. In July of 1863, the crew of the Union Naval Vessel *Moose* commandeered a meal and provisions from the Fitzhughs before sailing upstream to engage the forces of General John Hunt Morgan at the battle of Buffington Island.

All of this is well documented in the diary of Henrietta Fitzhugh Barre. Ms. Barre's diary and anecdotal evidence suggests that the homes and improvements of the extended Fleming and Fitzhugh families (JA-0294, Fleming family; JA 0010-0005 and JA-0274, Fitzhugh family homes) were subject to similar Union actions.

(NPS Form 10-900)

United States Department of the Interior
National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 8Page 129

After the Civil War, the charter of Ravenswood was amended and reenacted by an act of the Legislature of West Virginia, passed February 25, 1868. It described the corporate limits thusly:

The corporate limits of the Town of Ravenswood shall be as follows, to-wit: Beginning at the mouth of Sand Creek, at low water mark, and running thence with said creek to the foot of Gallatin Street; thence with the line of said street to the line of R. S. Brown's farm; thence with the line of said farm to the Ohio River; thence down the Ohio River, at low water mark, to the place of beginning."

In addition to all of what was considered the town of Ravenswood in 1868, the "Old Town" Historic District also includes the properties between the current eastern city limits and Gallatin Street; thus, the corporate bounds described in 1868 account for approximately 75% of the ground within the "Old Town" Historic District.

Aside from access via the river, Ravenswood was a relatively isolated community through the 1850s, 1860s and 1870s. Roads, or what passed for roads, were often little more than improved trails running along the river and creek bottoms.

Prior to the Civil War, the roads of western Virginia were few in number and generally poor in quality, and the quality of the roads deteriorated further as the war progressed. After the war, the lack of infrastructure proved beneficial to Ravenswood and other river towns. Like many other similarly-situated towns, Ravenswood became a commercial hub for the residents of outlying communities and farms. Even with its proclivity for periodic flooding or low-water events, the Ohio River was the surest and most economical means for transporting goods in the 1860s through the 1880s. Several early roads were constructed; they included the Ohio River Hills Road, the Charleston, Ripley and Ravenswood Turnpike and the Ravenswood and Reedy Creek Turnpike

The first Ravenswood resident to take advantage of the river for commerce was Bartholomew Fleming. Born in Pennsylvania in 1801 or 1804, he made his way to Ravenswood by way of a flatboat while still a teenager and was a permanent settler at Ravenswood by 1820. He and his family would, among other endeavors, be involved in the delivery of mail by way of riverboat. He also kept a fuel yard to supply the steamboats that plied the river. By 1831, he was in the business of ferrying passengers and goods across the Ohio River. In 1877, Bartholomew Fleming owned Town Lots 7 and 8. These lots adjoined each other and were located just northeast of the intersection of Walnut and Water Streets. Fleming and his family operated the ferry from the landing at the end of Walnut Street to their property in Meigs County, Ohio. The

CONTINUATION SHEET

Section number 8

Page 130

Fleming family would also engage in the milling business. One of the original, Fleming-family homes (JA-0294) is located at the intersection of Sycamore and Race Streets.

In addition to commercial goods, the river was also the surest and fastest means of travel between north and south, thus from its earliest days, Ravenswood would serve as a stopping point for travelers. A number of restaurants, hotels, boarding houses, taverns and opera houses would be constructed in the historic district to meet the entertainment, lodging and boarding needs of transients, laborers and salesmen.

Victoria Inn in the 1920s? (JA-0010-0031)

Facilities for lodging and dining have been a part of the town since at least 1839. According to one source, a hotel was then in operation in Ravenswood, probably near the confluence of Sandy Creek and the river. By 1877, at least three hotels were in operation. One of these may have been the St. Charles Hotel, which was located on Broadway Street. Other hotels and boarding houses would follow through the years. Of these buildings, only the Victoria Inn (JA-0010-0031) survives.

Ravenswood also experienced growth due to the opening of several railroad lines. On June 16, 1884, the Ohio River Rail Road opened its line for traffic between Wheeling and Parkersburg. The line was extended to Huntington by 1888.

In a 1901 agreement, the Baltimore & Ohio Railroad assumed operation of the Ohio River Railroad and by 1912 it became the Ohio River Division of the Baltimore & Ohio Railroad. Passenger service on the Ohio River Division was discontinued on January 31, 1957.

The ticket on the following page provides a glimpse of the extent of service available in the Ravenswood area on the Ohio River Rail Road, before 1912. Note that, from Belleville to Letart, a roughly 30-mile long stretch with Ravenswood at the center, the rail road had 15 stops. For the farmers and citizens of the small communities served by the rail line, this allowed ready access to Ravenswood's marketplace and the goods and services that the town had to offer.

The Ohio River Rail Road included two branch lines. The Ravenswood, Spencer & Glenville Railroad met the ORRR near Ravenswood's Washington's Land Park, while the Ripley and Mill Creek Valley Railroad ran from Cottageville to Ripley.

While passenger service was offered, travelers arrived in town and embarked from a terminal that was located on the east side of the tracks, diagonally opposite from the Victoria Inn. That is, it stood on the northeast corner of the intersection of Mulberry and Broadway Streets.

Unfortunately, the passenger terminal that the Ohio River Rail Road built in Ravenswood has been lost. However, the baggage pavilion was saved. This structure was moved to the Veteran Memorial City Park and has been used as a picnic shelter for years.

Freight Terminal

The Ravenswood freight terminal building still exists. It lies just outside of the Old Town Historic District on the northeast corner of the intersection of Sycamore and Broadway Streets.

Page 132

The figure on the left is excerpted from the 1909 Sanborn Map® and depicts the “industrial” part of the historic district.

Served by the river, the railroad, and passable surface roads, Ravenswood also played host to a number of wholesale and retail grocers, department stores, hardware and house ware stores, pharmacies, banking institutions and professional offices. Many of the buildings that these enterprises were located in were built above Broadway Street and the railroad, and thus, beyond the reach of river flooding.

Notable among these surviving buildings are the former Ravenswood Grocery Company (JA-0010-0001), A.P. Fisher’s Grocery (JA-0219) and the J. A. McMurray Grocery Store (JA-0010-0029) buildings. Surviving buildings that housed department stores include the K. M. Click & Company building (JA-0010-0051), the building that housed the Slaven Store Company (JA-0010-0040) and the Craig Building (Ravenswood Cash Store, JA-0010-0038). Stores buildings that housed hardware, house wares and department stores included the Harpold Brothers (McIntosh) building (JA-0010-0058) and the W. G. Watts & Son (JA-0210) building. Various professional and banking services were housed in the Fleming–Polsene–White–Staats building (JA-0010-0060), the J.B Shockey’s Jewelry Store building (JA-0010-0039), and the Jackson County Bank (JA-0010-0062), First Federal Savings and Loan Association (JA-0010-0055) and Farmers Building and Loan Association (now City of Ravenswood Town Hall, JA-0010-0059) buildings. Buildings that hosted medical, dental and pharmaceutical concerns include the Starkey Hospital (JA-0234) and Priddy Hospital (JA-0010-0045) buildings, Dr. H.C. Wagner’s office (JA-0010-0062), the E.H. Nowell (JA-0010-0063) building and Brown’s Drugstore (JA-0010-0050).

The majority of these buildings were constructed during the period between 1890 and 1925, a period when Ravenswood saw it greatest growth and wealth. Ravenswood’s fortunes began to wane in the late 1920s. From then until the mid-1950s, Ravenswood would be isolated from many of the changes that the rest of the nation would see. River traffic was diminishing and

National Park ServiceNATIONAL REGISTER OF HISTORIC PLACES
CONTINUATION SHEETSection number 8Page 133

passenger traffic by rail was also in decline. Improved highways and use of the automobile and trucking were changing the landscape of the nation. But the main state road through the county, State Route 21, bypassed Ravenswood. State Route 2 ran along the banks of the Ohio River, but its paving stopped 30 miles above and 30 miles below Ravenswood. The unpaved stretch would not be completed through Ravenswood until 1954. Without access to the most popular modes of transportation, Ravenswood's growth stagnated.

As the 1950s rolled along, Ravenswood and the surrounding area were about to be transformed by events unlike any other in the past. The text below was originally presented in an article entitled "Look Homeward Angel" in the Summer 1958, Kaiser Aluminum News.

In 1911, state geologist I. C. White of West Virginia sat down in his office in Wheeling and wrote the following description of Ravenswood.

Ravenswood, the largest town in Jackson County, is located on the Ohio River at the mouth of Sandy Creek, 36 miles south of Parkersburg and 85 miles north of Huntington. It is situated mainly on the second terrace of the Ohio River and is therefore above high water. The land where the town is located was once owned by George Washington. The town had a population in 1900 of 1074 and in 1910 of 1081.

There are located here an excellent high school, six churches, a canning factory, fifteen stores, three banks, and two building and loan associations...it derives a portion of its support from the railways, but the larger portion is derived from the agricultural districts.

The *Kaiser Aluminum News* article went on to say:

As late as 1951 - forty years that transformed most of the rest of the United States - the only item that would needed to have been changed was that the population had grown to 1,175.

Since the 1920s, Ravenswood struggled along on the services it could render as a shopping center and rail-shipping point for those of the county's 2,000 farm families who did not find Ripley more convenient. As is the case today, the population of Ravenswood was made up primarily of older, semi-retired or retired people. Most of the youth had left for better prospects in Wheeling and Charleston and the industrial cities of the North.

CONTINUATION SHEETSection number 8Page 134

The *Kaiser Aluminum News* article continues:

By mid-summer 1954, the town's main street might well have been a movie set for turn-of-the-century motion pictures. Two blocks of red brick and painted metal buildings stretched down either side of Route 2 (Washington Street, now State Route 68). A single movie house and two taverns offered the town's "night life" entertainment. There were no intersection traffic lights, no parking meters, few intact sidewalks or curbs. The residential section of the town was characterized by old homes, some of them graceful reminders of a more prosperous era, stately trees lining both sides of the unpaved streets. The most outstanding features in town were the church spires and the high school.

All of this changed in August of 1954 when Kaiser Aluminum announced that it planned to build a new sheet and foil rolling mill seven miles south of Ravenswood. Before the shock of this announcement had worn off, it was followed by announcements in October and December that the plant would be expanded to include a hot rolling line, more cold rolling and finishing equipment and a reduction plant. When all was said and done, the plant would be the largest integrated aluminum plant in the world and it would employ more than 4,000 production workers and its construction would employ 7,000 construction workers.

In the early 1900s, what would become known as "North Ravenswood" had begun to develop. As the name suggests, it was a residential/commercial area north of the corporate limits. This area, although unincorporated, began to rival Ravenswood in size and population. In addition to housing growth, North Ravenswood also hosted several small factories, including a marble works and a pottery factory.

North Ravenswood, and Ravenswood proper were separated by a large farm that ran from the Ravenswood corporate limits northward for nearly two miles until it met the North Ravenswood development. This farm also extended from the river several miles to the east.

After the Kaiser Aluminum plant located in Jackson County, the farmland that was between the original town of Ravenswood and North Ravenswood was subdivided and developed with homes and businesses and the entire area brought within the Ravenswood corporate limits. From the late 1950s on to the present, this former farm area was referred to locally as the "new part of town" and the original town became known as the "old part of town" or the "Old Town."

Page 135

Criterion A: Community Planning and Development

Beginning at the point where Washington's Ravenswood-area holdings were survey and divided among his heirs to the Fitzhugh's platting of the town and beyond, Ravenswood was a "planned" community. The original town consisted of blocks divided by streets that ran parallel with the river and streets that ran perpendicular to it. From the river moving east the streets were Water, Broadway, Race, Washington and Virginia. The perpendicular streets, from north to south, were Sycamore, Mulberry, Walnut and Sand. Beyond these boundaries, the Fitzhugh's continued to subdivide their holdings such that aforementioned street pattern would be repeated as the town expanded away from the river, to the east.

Criterion A: Commerce

Recognizing the value of access to the River, the Fitzhugh's prohibited any obstructions whatsoever "on the bank aforesaid [Ohio River] within the limits aforesaid but shall leave the same free for the ingress egress and regress of the said Bartholomew Flemming¹ and others owning lots in said Town to make roads and landings from the margin of the Ohio river up the bank to Water Street."

The town would grow around the river lots and Fleming's ferry landing through the latter half of the 19th century. In the late 1880s, the Ohio River Rail Road was constructed through the Ravenswood area. The coming of the railroad would lead to one of the most town's most prosperous periods and would lead to a 20-year period of population growth. For the next half century, Ravenswood would serve as a commercial center and river/rail-shipping point for many of Jackson County's 2,000 farm families.

Criterion C: Architecture

The "Old Town" Historic District is significant for its varied and well-maintained homes and businesses representing a wide range of architectural styles, among them: Greek Revival, Gothic Revival, Italianate, Second Empire, Queen Anne, Colonial Revival, Classical, Neo-Classical Revival, Tudor Revival, the Commercial Style, Craftsman Four Square, Craftsman, Bungalow, the Ranch Style, Moderne and Art Deco.

¹ The Fleming name is misspelled "Flemming" throughout the deed that this was quoted from.

Summary

In a 1794 correspondence to James Ross, Washington described his Ohio and Kanawha River holdings, including the land on which the propose historic district rests as “the cream of the country in which they lye, being the first choice of it.” Owing to the foresight of Washington’s heirs, the Fitzhughs, the town was laid out in an organized grid pattern and developed as a well-planned community. Its location on the banks of the Ohio and the later arrival of the railroad through town ensured the commercial health and stability of the community. The well-maintained homes and businesses in the district are excellent representatives of the architectural styles for the period c. 1830 through 1957.

CONTINUATION SHEETSection number 10Page 139**Verbal Boundary Description**

Bounded by Sandy Creek to the south, the Ohio River to the west, Sycamore Street and adjoining properties to the north and the Ravenswood corporate limits to the east.

Boundary Justification

The original town consisted of blocks divided by streets that ran parallel with the river and streets that ran perpendicular to it. From the river moving east the streets were Water, Broadway, Race, Washington and Virginia. The perpendicular streets, from north to south, were Sycamore, Mulberry, Walnut and Sand. The town would grow and streets were added, primarily to the east, but several would also be added between Sand Street and Sand Creek.

In 1877, Eli Hayes completed the Illustrated Atlas of the Upper Ohio River and Valley from Pittsburgh, Pa. to Cincinnati, Ohio. The Hayes map of town depicts Anne (the "e" was later dropped), Henrietta, Henry and Gallatin Streets to the east of Virginia and a number of large properties, on the south side of Sand Street, owned by the Fitzhughs, the Callisons, B.C. Hutchinson, J.W. Bennett, B.H. Hoyt, John Redman and C.M. Rice. The C.M. Rice property was divided into eight lots. W.D. Williamson owned a "sub-addition" that included the block bounded by Sand, Virginia, Walnut and Anne Streets and the Fitzhughs had an addition comprised of Town Lots No. 105 to 196

Later, Wilson and Bedford would be added to the east of Gallatin and Ashton and Ashton Lane would be added toward Sand Creek. Thus, by 1898, the "Old Town" district had been established.

In the early 1900s, what would become known as "North Ravenswood" began to develop. As the name suggests, it was a residential/commercial area north of the corporate limits. After the Kaiser Aluminum plant located in Jackson County, seven miles from Ravenswood, the farmland that was between the original town of Ravenswood and North Ravenswood was subdivided and developed with homes and businesses. From the late 1950s on to the present, this area was referred to locally as the "new part of town" and the original town became known as the "old part of town" or "Old Town."
